

PRACTICAL ARCHITECTURE,

*or a Sure Guide to the
true working according to the
Rules of that Science:*

Representing the
FIVE ORDERS,

with their several
DOORS & WINDOWS
*taken from Inigo Jones & other
Celebrated Architects*

*to each Plate Tables Containing
the exact Proportions of the
several Parts are likewise fitted*

Very usefull
to all true Lovers of
ARCHITECTURE,

*but particularly so to those
who are engag'd in y^e
Noble Art of Building*

By Will.^m Halfpenny.

*Printed & Sold by Tho. Bowles in St Pauls
Church Yard, and John Bowles over ag^t.
Stocks Market, London.*

To
Thomas Frankland
Esq.

In token of true Gratitude
for unmerited Favours
This Small Volume is
humbly Dedicated;

By
His Most Obligated
humble Servant

William Halfpenny

THE PREFACE.

It is altogether needless to say much concerning the Usefulness of this small Treatise, or the motives which put me upon the compiling of it; for its Serviceableness and Advantage, to all who are employ'd in Buildings will appear at the first Inspection, & the general complaint of Workmen for want of something in this Nature, is sufficient reason for my Undertaking it, tho' at a Time when the Town is already burthens'd with Volumes True Proportions are the Fundamentals, the Beauty and the very Life of Architecture, and yet tho' many and able Hands have treated of that Science, I know of none who have bestow'd their Labours in calculating these first Principles thereof; but now with great Expectations they are made Publick, neatly & distinctly Engraved, on Copper and brought into such a Size as without Burthen may be carry'd off in the Pocket and be always ready for Use. They are calculated to the severall Sizes which must often occur in Practice, from the small gradually up to the largest, so that after the Measure of one part is given by having recourse to these Tables, the Measures of 9 other parts are seen at one view and the Time and Trouble of working their proportions of every part by Figures are saved.

Explanation of the Tables.

The Measure given for any particular part being found in the Line of Figures belonging to that Part, by carrying the Eye perpendicularly, the Measures of the other Parts are found at once.

For Example.

Suppose, in the Dorick Order, Page 5, that 10 Inches be given for the Diameter below, and it be Demanded what must be the Diameter above, and Height of the Column; having found 10 Inches in the Line of Figures belonging to the Diameter below, perpendicularly underneath, in the next Line, which stands for the Diameter for above, is 8 Inches and 118 parts of an Inch, and so underneath that in the Line of Figures for the Height of the Column, is 6 Foot 8 Inches. Q. E. D.

Again,

Suppose, in Page 47, the given measure for the Diameter of a Window, be 42 3/4 Inches, & it be demanded, how much of Entablature must project and how wide the Window Stool must be; In order to resolve this look between the two parallel Lines in the Diameter Line of Figures till you come to 4 Foot 3 Inches the given Measure, which having found, direct your Eye downwards perpendicularly between the two perpendicular Lines, till you come to the Line of Figures belonging to the Parts required, where you'll find the projection of the Entablature must be, 7 Inches and 110 parts of an Inch, and the Measure of the Window Stool must be 4 Foot 9 Inches 118 parts of an Inch. And so for any other part.

Diameter		43	
Projection of Entablature		70	
Window Stool		40	

If a lesser Measure should be wanted for a Column than what is specified in the Tables belonging to the Column, by halving the given Measure, and doubling all the parts that are in proportion to that half, any Question may soon be Answered.

NB. By the Figures engrav'd on Plate 4. 8. 12. 16 & 20 may be seen at once how far each Part should project, as for Example in the Tuscan Order the Cornice rises 2 & projects 2; the Corona rises 5 & projects 5. 1/2 the Cavetto rises 4 & projects 3 & 1/2 of those parts &c. And so of the rest.

A Rustick Door from Palladio.
much used by the Modern Architects.

*The following Draught represents a Door
somewhat narrower at Top than at Bottom,
it was originally taken from the Works of
Vitruvius, and is now come into great use
because of its conveniency
in Shutting it self.*

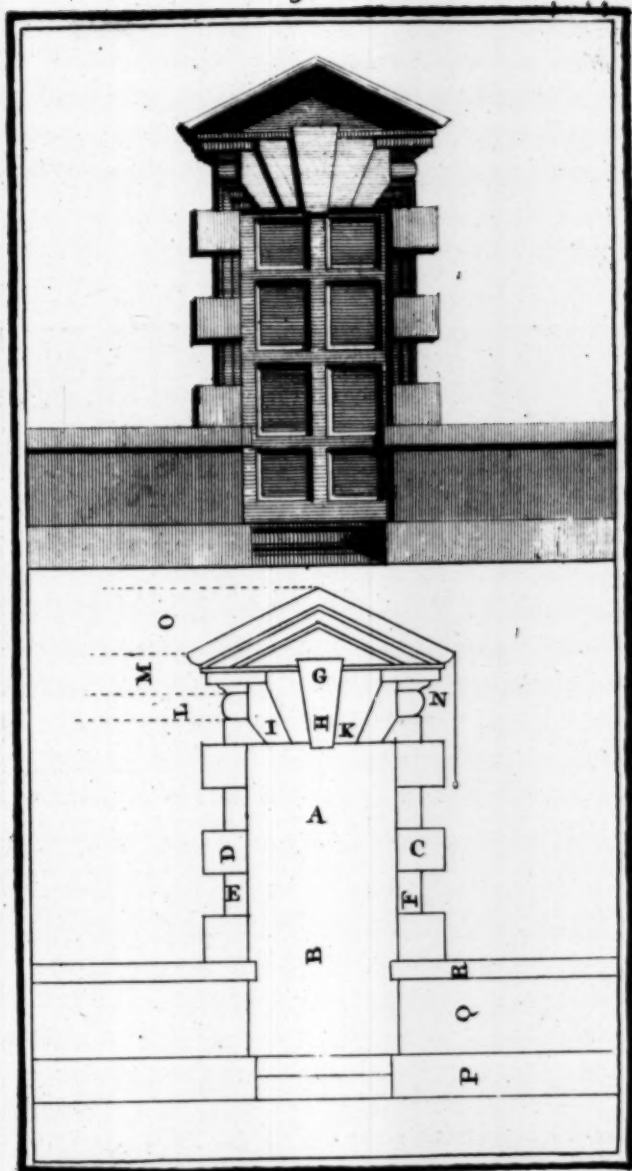

A Diameter below. B. D^o above.
C Hight D^o D. Width of Architrave.
E Hight of Frize. F. Hight of the Cornish.
G Projection of D^o H. Plinth.
